EXPERIENCE

Microsoft

Software Engineer II (2019 – 2025), **Software Engineer I** (2017 – 2019)

CI/CD & Internal Tooling

- Architected and led delivery of a testing platform used by 150+ engineers supporting Copilot Hub, standardizing automated testing
- Defined standards and requirements for an AI-driven static analysis system enforcing testing and compliance
- Consolidated disparate AI tooling from across Microsoft teams into a unified, maintainable platform codebase
- Built and managed CI/CD for Whiteboard and Copilot Hub, automating builds, testing, and validation
- Developed Azure microservices enabling secure credential and certificate management for internal infrastructure
- Created and maintained Azure DevOps repositories for internal analytics utilities, including CI/CD

Observability & Telemetry

- Co-designed and implemented an OpenTelemetry instrumentation framework for Microsoft Whiteboard, making observability consistent across the service while keeping developer overhead low
- Enhanced a telemetry query DSL used by 1,000+ Edge engineers, improving analytics and diagnostic capabilities
- Designed telemetry query APIs ensuring statistically valid results for product experimentation and feature analysis
- Developed automation that generated dashboards from telemetry data for new feature rollouts

Reliability & Incident Response

- Established on-call and incident response practices, reducing incident resolution time by 80% and engineering support workload by 70%
- Maintained 99.9% availability for Microsoft Whiteboard supporting school systems globally during COVID-19
- Designed support and escalation model for sovereign government cloud environments (GCC, GCCH, DoD)
- Built tooling and operational runbooks enabling customer support to resolve issues without engineer escalation

API & Data Layer Development

- Designed data models and API contracts for programmatic access to Whiteboard resources via Microsoft Graph
- Implemented OAuth-based authentication and JWT access token validation for Whiteboard backend services, integrating with Azure AD scopes and permissions

Platform & Framework Development

- Drove migration of Whiteboard's layout engine from C# to TypeScript/React within its backing framework
- Mentored three interns who all returned to Microsoft as full-time engineers
- Built layout-engine tooling to position visual elements correctly on screen, supporting 80+ engineers as Whiteboard scaled to tens of millions of users
- Owned layout logic for on-screen placement for non-hierarchical graphical elements across 50+ internal applications

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, C#, .NET, SQL, React, C++, Python, R

Infrastructure & Automation: Azure services, Azure DevOps, YAML-based CI/CD, PowerShell

Testing, Observability & Security: Jest, Playwright, OpenTelemetry, Power BI, OAuth/JWT authentication, Distributed Tracing & Observability

EDUCATION

Harvey Mudd College

Bachelor's Degree, Computer Science and Mathematics; Concentration in Economics

Claremont, CA

May 2016
